

Natural Step Menopause

300 ADVANCED 300RX

With PhytoEstrogens,
Mood Enhancers & Energizers**

The natural transition of a woman's body during menopause creates the need for a different nutritional balance. Hormonal changes in many women cause a number of different symptoms such as hot flashes, night sweats, irritability, hormonal imbalance, mood swings, low energy, changes in sleep pattern, etc. Our proprietary blend of herbal and nutritional compounds is designed to support the body through this natural change in life. Phytoestrogen (red clover, chastetree berry, citrus bioflavonoids, black cohosh, dong quai and soy) is the plant world's version of estrogen and is similar to our body's estrogen and may help alleviate symptoms of menopause. Due to its effectiveness in reducing sweating, white willow bark extract is helpful in treating hot flashes and night sweats. Ginseng root powder helps you to maintain energy levels while taurine, St. John's wort extract and 5-HTP help in the emotional transition.
